

FUEL LEVY INFORMATION

December 2010 – (for period 1/12/2010 to 31/12/2010)

4.2 %

The significant rises in fuel prices have forced the implementation of a fuel levy to partially offset the substantial additional fuel cost.

The rate is adjusted each month with reference to the movement in the price of diesel from Caltex. If the price of fuel moves and stays firm for a two week rolling period the levy will be adjusted up or down.

Fuel information is also available from the Victorian Transport Association. We feel this is a simpler and more flexible alternative to a formal rate review based on fuel prices.

Thank you for your continued support with this issue as it would be impossible to absorb such costs.

Prior month's levy was:

November 2010 – 4.1%
